

Delnor Hospital Geneva, IL: Stone Hospital Exterior Façade

Case study by StonePly

The new Delnor Expansion is a 24,000 square foot addition to the well-known hospital that serves the needs of the residents of Geneva, Illinois. For the exterior façade of the hospital, StonePly Mocha Cream stone panels were selected. The panels were set with an open joint rain screen design. "The design allows for future growth and we were able to meet the client's specialty design standards that exist to support their brand", said Sandy Faurrot - vice president of Callison RTKL. Thanks to the lightweight and easy installation of StonePly, the construction of the new phase and the installation of the façade was able to take place while the adjacent hospital remained fully open and functional. The two-story stone façade features clean, crisp looking Mocha Cream Limestone panels. The Delnor Hospital is rated by the US News and World report as one of the nation's best hospitals and the façade by StonePly is just one of the many hospital stone façades that the StonePly company has provided over the years. Health care facilities appreciate the rich, high quality look of natural stone combined with the simplicity, speed and economy of the StonePly panel system. "If we had to build this with traditional stone, we probably would not have been able to complete it on time or on budget", Tom Jones. Adding the Delnor Hospital to the many successful projects StonePly has completed, we're proud to be able to contribute to the healthcare facilities around the nation and the quality of care.

If you need assistance with a stone façade for your healthcare facility, you can find typical details and specifications at StonePly.com.
